

Environmental Scrap Garden

Grow your own edible garden using your vegetable scraps. It's a great way to eat healthy, save money, and have a beautiful garden that is very easy to maintain.

Step 1. For every vegetable you cut up, save a reasonable piece with some roots attached.

Step 2. Place your roots into a transparent container $\frac{1}{4}$ full of water.

Step 3. Place in a sunny area such as window ledge.

Environmental Scrap Garden

Step 4. Replace water every second day for best results.

Step 5. Watch they grow and enjoy!

Environmental Scrap Garden

Burning fossil fuels like gasoline and diesel releases carbon dioxide, a greenhouse gas, into the atmosphere. The buildup of carbon dioxide and other greenhouse gases causing the Earth's atmosphere to warm, resulting in changes to the climate we are already starting to see today. The transport of produce is a top factor because of the short shelf life of fresh vegetables and fruit, growing your own produce isn't just affordable, it helps reduce the impact transporting has on the environment. Starting your own garden and re-growing your own vegetables isn't the only thing you can do to help, buying local produce and grocery's also helps our atmosphere. Sometimes when produce is bought at a grocery store we forget the work and care that went into harvesting. We don't take the time to realize earth is the perfect environment for us to grow the nutriment we need to survive and stay healthy, that's why home grown produce gives you gratification and is more meaningful to consumers. Although the grocery store is a convenient place to get your nutriment, growing at home helps us keep the atmosphere we need in order to survive and teaches us the importance of our enviornment.
